

Warts and verrucas are small, hard lumps on the skin (hardened skin spots) that are experienced by most people at some point in their life. They often go away over time although this can take months or even years. They are both caused by a viral infection called human papillomavirus (HPV). Verrucas can be particularly painful due to the fact that weight is applied to them during standing or walking. Warts can often appear on the hands and other regions of the body and although not painful in nature they can give rise to distress and embarrassment.

Here at Nativis, we have developed a soap and a gel that will remove warts and verrucas in a painless and effective way. Our sensitive soap will cleanse and hydrate the skin on and around the affected site to prevent infection. The gel will soften and shrink the hard skin on and around the verruca and wart. Continued use for a period of 2-3 weeks will return the skin to a natural healthy state. The soap and gel are 100% natural in composition, and both contain a natural active ingredient derived from Sericin which we have called Silk Hydra-Fix[®]. This active ingredient will hydrate the skin and also moisturise it simultaneously. The amino acid composition of the silk Hydra-Fix[®] will combat the HPV virus allowing the skin to restore itself naturally. Regular use of the soap and gel on an affected site should restore the skin to good health after 2-3 weeks at most.

Products Package for Warts and Verrucas

Silk Hydra-Fix Soap (75g) Directions for Use - Wash First

1. After wetting the affected area with warm water, build up a lather with the soap and gently cleanse the affected area using clean fingers.
2. Dab dry the affected area after rinsing with warm water, using a clean cotton towel.

Silk Hydra-Fix Moisturising Gel (200g)

Directions for Use - Hydrate and Moisturise

1. After washing, apply a small quantity of the gel onto the affected area. Do not massage it in as this may be painful.
2. Apply a soft plaster to cover the affected area once the gel has been applied.
3. Always apply a fresh plaster every time the affected site is washed, and the gel applied to minimise the risk of infection. Always wash the hands before carrying out the above procedure to again minimise the risk of infection.

Package Price £26.10 - SAVING 10%

Repeat above procedure at least twice a day for best results, ideally morning and night. Be sure to use a soft plaster after every soap wash/application of gel to minimise the recovery period. After a period of 2-3 weeks (possibly sooner) following this regime, warts and verrucas should disappear and the skin should then return to a normal state. Continue washing with soap and applying the gel for a period of 1-2 weeks after the wart/verruca has disappeared to allow the affected region to fully restore to its normal state.
